BLAST By Jankel **TECH**
SEATING

WORKING WITH YOU
TO DELIVER OUTSTANDING PROTECTION

**BESPOKE SEATING SPECIALIST AND
VOLUME SEATING MANUFACTURER**

WORLD-CLASS SEATING TECHNOLOGY

We partner with OEMs worldwide to bring bespoke seating solutions for their light, medium and heavy military vehicles.

From design to delivery, we work collaboratively with you to push boundaries and create intelligent solutions to technically challenging problems.

Our blast mitigation technology has been trialled independently by UK, US and Australian governments, and has been proven by independent expert bodies to increase the survivability of seated occupants during a blast event.

As well as providing leading blast protection, our seats are designed to:

- Increase occupant safety
- Enhance personnel comfort
- Reduce harmful vibrations to the occupant
- Optimise seating proportions
- Maintain ergonomic integrity

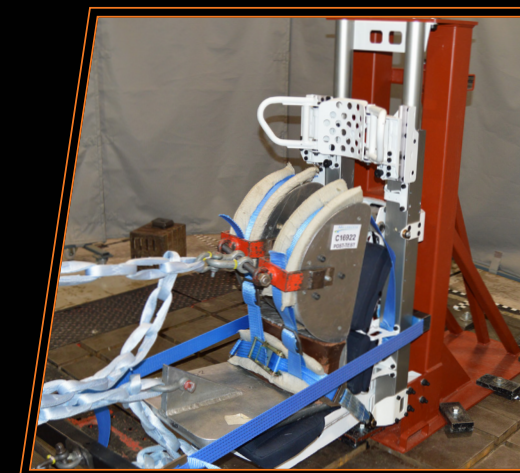

Working to stringent military and regulatory standards, our development programmes include design, analysis, prototyping and testing so that you can be confident in meeting your end-client's requirements.

PRECISION MANUFACTURE, VOLUME SUPPLY

We have built close partnerships with a wide range of OEM customers who rely on us to deliver our specialist seating in volume – we have more than 100,000 seats in active service today.

This allows us to support you in fulfilling your programme requirements, wherever you are located around the globe:

- Work with us to select which of our permanent, fully-accredited production facilities are best located for your programme and delivery needs
- Talk to us about how we have set up dedicated in-country manufacturing for international programmes
- Ask us about how we use our growing network of local manufacturers to meet your supply chain requirements

Our rigorous production and quality processes ensure that every seat that leaves our care is ready for theatre, able to support and protect personnel for its lifetime use.
